

Project Description

During an Internal Environmental Audit a client identified a contaminated land issue associated with a legacy waste facility on land now owned by the client. CARAS were initially engaged to guide the company through the remediation process and produce a detailed design based on the preferred remediation option approved by the EPA. CARAS were subsequently engaged as superintendent on the project to ensure that the works under construction were completed in accordance with the contract, project specification and all relevant environmental and WHS legislation.

Project Title:
Confidential

Client:
Confidential

Category:
Project Management

Location:
North Victoria

Services Provided

- Pre Contract Commercial Review of contractual documentation
- Pre-Construction Project Management
- Construction Supervision (On-Site Superintendent)
- Contract Administration (AS4000 contract)

Project Outcome

CARAS were responsible for administrating the contract in a fair and reasonable way which mitigated the risk of contractual disputes and eliminated any misunderstandings during the construction works. CARAS ensured the project was delivered within the client's budget, on time, and to the highest quality standards.
